

COUNTRY HOUSE

Several months ago, it became necessary to replace our draft beer system in order to add more faucets. When discussing this with our Perlick representative, he told us about the Auper Flowmeter Beer Control System. We realized that if we could accurately track every ounce of beer dispensed it could result in a huge savings. The results are fabulous, fantastic, and practically unbelievable. The bottom line is that this system paid for itself in savings and increased revenue in two months. We recently purchased two more systems for our other two locations. We would not think of operating without the Auper Flowmeter System.
